TABLE OF CONTENTS FOR

"KINETIC THEORY OF FLUIDS"

Ya. I. Frenkel

	Page
Foreword	3
Chapter I. Real Crystals at High Temperatures	5
1. Evaporation of Crystalline Bodies.	5
2. Dissociation and the Formation of "Gaps" in Crystals.	10
3. Dissociation of Crystalline Lattice Versus p and T.	14
4. Structural Disruption and Thermal Motion of Disrupters of Order in Crystals.	19
5. Self-Diffusion and Diffusion of Admixtures in Crystals.	30
6. Disruption of Orderliness in Binary Ionic Crystals.	39
7. Electrical Conductivity of Ionic Crystals.	44
8. Electron Mobility (Conductance) and Optical Properties of Ionic Crystals.	51
Chapter II. Disruption of Order in Composite and Molecular Crystals	58
1. Order and Disorder in the Disposition of Atoms in Binary Alloys (Intermetallic Compounds).	58
2. Far and Close Order.	64
3. Improvement of the Bragg-Williams Theory.	71
4. The General Thermodynamical Theory of Phenomena Connected With the Degree of Order.	77
5. Orientational Order in Dipole Crystals.	85
6. Orientational Melting.	95

	<u>Page</u>
Chapter III. The Properties of Fluids and the Melting Mechanism	99
1. Relation Between Solid and Fluid States.	99
2. Influence of Variations in Volume and Temperature Upon the Properties of Solids and Fluids. Mechanism of Melting.	103
3. "Hole" and Dissociation Schemes of the Melting Process.	110
4. Closest Order in Fluids as a Result of "Structural Diffusion" of a Crystalline Lattice (Prince).	115
5. Fluid Structure Versus Free Volume; Kirkwood's Theory.	128
6. Equation of State of Crystalline Bodies and Melting.	137
7. Temperature Dependence of Solidity (Shear Modulus) of Crystalline Lattice.	151
8. Thermodynamics of Relatively Stable States of Solids and Fluids.	156
9. Fluids in the Solid-Form State.	160
10. The "Hole" Theory of the Fluid State.	164
11. Equation of State of Fluids at High Temperatures.	170
Chapter IV. Thermal Motion in Fluids and Their Mechanical Properties	177
1. Thermal Motion in Simple (Unary) Fluids.	177
2. Viscosity of Simple Fluids.	180
3. Mechanism of Viscous Flow and Its Connection With the Maxwell Theory of Relation Strength.	184
4. The "Hole" Theory of Diffusion and of Viscosity of Fluids.	189
5. Viscous-Elastic Phenomena Depending on Structural Variations of a Fluid.	195
6. Thermal Theory of Viscous-Elastic Gases and Fluids (Knezer).	207
7. Generalization of Equations in the Theory of Elasticity of Amorphous Bodies, Taking the Effects of Viscosity Into Account.	210
8. Application of the General Theory to the Propagation of Oscillations in Amorphous Bodies.	216
9. Hypersonic Waves in the Thermal Motion of Solids and Fluids and the Light Dispersion Due to Them.	222
10. Generalization of the Navier-Stokes Equations of Hydrodynamics.	231
Chapter V. Orientation and Rotary Motion of Molecules in Fluids	235
1. The Nature of Rotary Motion of Small and Large Molecules.	235
2. Polarization of Dipole Fluids in a Constant Electrical Field (Old and New Theory of Debye).	238
3. Onzager's Theory.	245
4. Perfection by Kirkwood of Debye and Onzager's Theory.	253
5. Polarization of a Fluid With Anisotropic Nonpolar Molecules.	260
6. Polarization of Dipole Fluids in Variable Electrical Fields.	265
7. Orientation of Nonpolar Molecules in Variable Fields.	271
8. Orientation of Molecules in the Current of a Fluid, and the Thermal Fluctuations of Anisotropy.	276
9. Fluctuations of Anisotropy in Fluids and Light Dispersion (Scattering) Due to Them.	281
10. Mutual Interorientation of Molecules in Fluids; "Swarms" and "Sibotaxic" Groups.	287
Chapter VI. Surface Phenomena	292
1. Surface Tension of Fluids and Its Dependence on Temperature.	292
2. Monomolecular Adsorption Layers.	299
3. Polymolecular Films (Thermodynamic Theory).	305
4. Molecular-Kinetic Theory of Fluid Films.	312

50X1-HUM

	<u>Page</u>
5. Information on the Cohesive Forces Between Molecules as Applied to Their Surface Energy, and Application of This Method to the Problem of the Distribution of Molecules in Solutions.	319
6. Orientation of Molecules in the Surface Layer of Fluids, and Electrocapillary Phenomena.	326
Chapter VII. Kinetics of Phase Transformations	336
1. Thermodynamical and Kinetic Theories of Condensation of Super-saturated Steam (Vapor).	336
2. Metastable States and Heterophase Fluctuations in Steam (Vapor) Close to the Saturation Point.	342
3. General Theory of Heterophase Fluctuations and of Pretransitional Phenomena.	349
4. Kinetics of Condensation and Other Phase Transformation in Metastable Systems.	357
5. The Role of Solid Surfaces and Foreign Solid Particles in Cavitation of Fluids and Condensation of Steam (Vapor).	365
6. Kinetics of Crystallization in Fusion and Melting.	372
Chapter VIII. Certain Properties of Solutions and High-Molecular Substances	380
1. Antagonism of Internal and External Bonds.	380
2. Self-Dissociation of Dissolved Substances.	384
3. Electrical Conductivity and Viscosity of Fused Salts and of Binary Mixtures.	390
4. Chemically Complex Substances and Their Solutions.	394
5. Solutions of High-Molecular and Polymeric Substances.	397
6. Statistics and Kinetics of Configurations of High-Polymeric Molecules in Solutions.	401
7. Mechanical and Thermodynamical Properties of High-Polymeric (Rubberoid) Substances.	412
8. Vulcanization of Rubber and the Theory of Muscular Activity.	420
